

DATA SHEET

T LW20010

Triple eccentric control and shut-off butterfly valve type LTR 43

DIN and ANSI version

Use

Triple eccentric, metal seated control and shut-off valve for high-pressure applications in the process industry

Nominal size DN 80 up to 2000 and NPS3 up to 80
Nominal pressure PN 10 up to 320 and cl150 up to 2500
Temperatures -196 up to +700 °C (-321 up to +1292 °F)

Special features

- Wafer-Type and Lug-Type design (threaded holes according to EN 1092-1, ASME B16.5 or ASME B16.47) as well as double-flange version or body with Weld End according to ISO 5752, EN 558, BS 5155 or B16.10
- Leakage free tightness
- Two-way flow with maximum pressure differential
- Use as a quick-closing unit (ESD) possible
- Body made of
 - Cast steel (C-steel)
 - Stainless steel
 - Special alloys
- Seal ring made of
 - Stainless steel/graphite laminated
 - Stainless steel/PTFE laminated
 - Stellite-coated/hardened stainless steel
 - Special materials

The control and shut-off valves can be operated with a pneumatic, electric or hydraulic actuator or manual gear.

Versions and options

- Fire-safe according to API 607, BS 6755 Part 2 and API 6FA
- Versions for cryogenic applications down to -196 °C (-321 °F)
- Body made of C-steel, Stainless steel, WC6; WC9, Duplex, Aluminium bronze, Monel®, Inconel®, Hastelloy®, Titanium, etc.
- Seat and seal ring made of several materials
- Packing according to TA-Luft/ISO 15848
- Low-noise and anti-cavitation

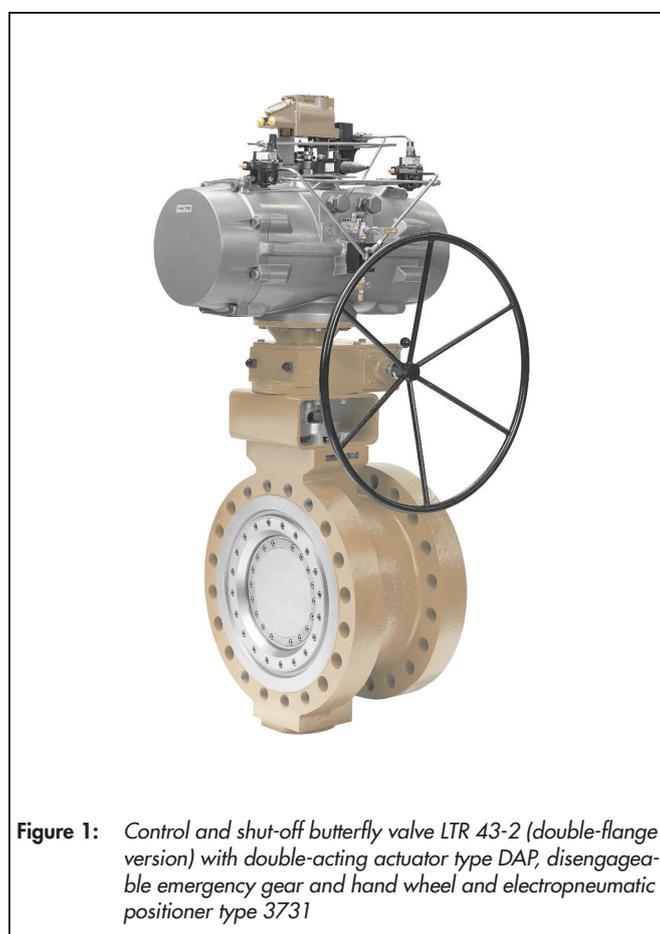

Figure 1: Control and shut-off butterfly valve LTR 43-2 (double-flange version) with double-acting actuator type DAP, disengageable emergency gear and hand wheel and electropneumatic positioner type 3731

- Heating jacket
- Outer bearing, inner packing
- Quick closing, less than 0.5 seconds
- NACE according to MR0103/MR0175/ISO 15156
- Special versions for applications such as: oxygen, hydrogen and LNG

Design and principle of operation

The media can flow through the shut-off valve in any direction. The flow characteristic value depends on the opening angle of the throttle disc and therefore on the area freed between the disc and the body. The seal takes place between the seat in the body and the seal ring. The seat adapts elastically to the seal ring. Friction forces are minimised by the triple eccentric and conical geometry.

Fail-safe position

The pneumatic rotary actuators can be designed with a fail-safe positions that are activated when the pressure is released as well when the supply energy fails.

- **Shut-off valve without supply energy "CLOSED"**
upon air failure, the disc is closed.
- **Process valve without supply energy "OPEN"**
upon air failure, the disc is opened.

The principle of triple eccentricity, see figure 3

- **1OS: Offset between the seat and the centre of the shaft**
The shaft is mounted completely behind the sealing surface of the disc and seat. This results in an uninterrupted sealing surface. The uninterrupted sealing surface provides maximum tightness.
- **2OS: Offset between centre of the shaft and the centre of the body**
The shaft is positioned slightly offset from the centre of the body. Depending on flow-direction, the differential pressure has an opening or closing effect on the sealing system. In the case of a shaft-side inflow, the pressure supports the tightness.
- **3OS: Offset of the seat intersection point from the centre of the body**
The inclined conical seat geometry permits a friction free rotation and therefore reduces wear when opening and closing the seat seals. Breakaway torques caused by deformation are excluded. The conical sealing surface guarantees maximum tightness even with extreme requirements.

Seat combinations

- **LTR 43-2**
For critical applications, e.g. control with high tightness requirement, see figure 4. The solid seal ring and the seat protected against direct inflows in the body can be replaced by a removable retaining ring.
- **LTR 43-3**
For welding versions, see figure 5. The standard solid and optionally Stellite-coated seal ring can be replaced. The seat is coated with Stellite® as standard for better wear protection.
- **LTR 43-4**
For less wear-critical applications, see figure 6. Only the seal ring can be replaced. The seat is coated with Stellite® as standard for better wear protection.

Flow-direction

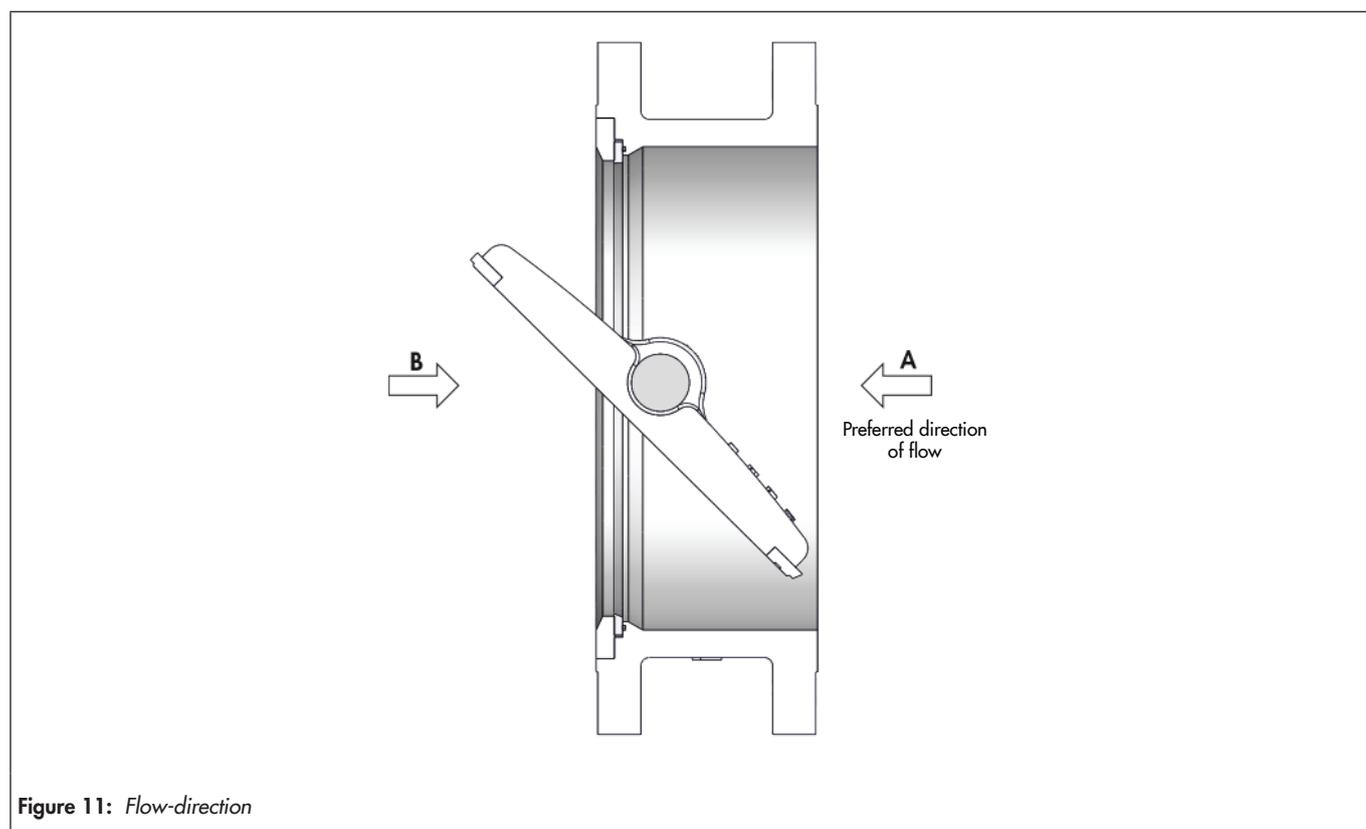

Figure 11: Flow-direction

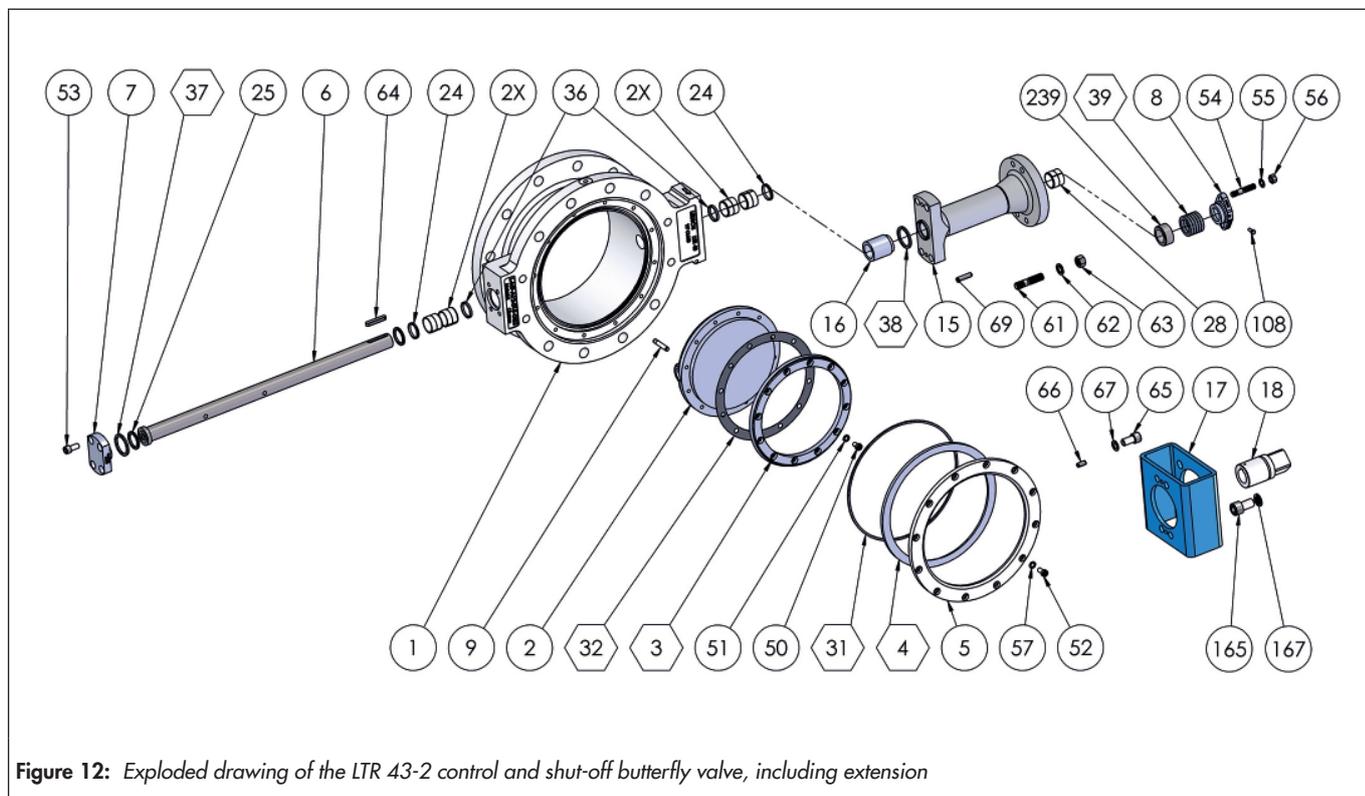

Figure 12: Exploded drawing of the LTR 43-2 control and shut-off butterfly valve, including extension

Table 28: Parts list for the control and shut-off butterfly valve, including extension

Pos.	Designation
1	Body
2	Disc
3 ¹⁾	Seal ring
4 ¹⁾	Seat
5	Retaining ring
6	Shaft
7	Cover
8	Gland
9	Pin
15	Extension
16	Extension spacer
17	Bracket
18	Coupling (option)
2X	Bearing
24	Spacer ring
25	Thrust ring
28	Bearing
31 ¹⁾	Gasket body
32 ¹⁾	Gasket disc
36	Bearing protector
37 ¹⁾	Gasket cover
38 ¹⁾	Gasket extension

Pos.	Designation
39 ¹⁾	Packing
50	Screw
51	Wedge-lock-washer
52	Screw
53	Screw
54	Stud bolt
55	Washer
56	Nut
57	Wedge-lock-washer
61	Stud bolt
62	Wedge-lock-washer
63	Nut
64	Key
65	Screw
66	Pin
67	Wedge-lock-washer
69	Pin
108	Screw
165	Screw
167	Wedge-lock-washer
239	Support ring

¹⁾ Recommended spare parts

Selecting and sizing the actuator

1. Calculate the appropriate Kvs coefficient
2. Select the DN and Kvs coefficient from Tables 9 to 12
3. Check the operation condition taking the pressure-temperature diagram into account
4. Select a suitable rotary actuator

Ordering text

Process valve: LTR 43,
Nominal size: DN / NPS
Nominal pressure: PN / cl
Any special version:

Manual gear or actuator (brand name):
Signal pressure: bar
Fail-safe position:

Limit signal transmitter (brand name):
Solenoid valve (brand name):
Positioner (brand name):

Miscellaneous:

Info

All relevant details regarding the version ordered, which deviate from the specified version in this technical description data, can be taken if required, from the corresponding order confirmation.
